

FOR IMMEDIATE RELEASE

Carestream Health Now Offering ScImage's Comprehensive Cardiology Imaging Solution

Powerful cardiology workflow software a perfect fit with Carestream Information Management Solutions

Rochester, NY – October 24, 2007 – Carestream Health, Inc., and ScImage have signed an agreement that enables Carestream Health to offer medical professionals a comprehensive solution for enterprise-wide management of cardiology data in the U.S. and Canada markets.

Sales representatives from Carestream Health in the U.S. and Canada already have begun selling ScImage's PicomEnterprise solution—with built-in capture and visualization tools—for integration with CARESTREAM Information Management Solutions (IMS). A cardiology solution featuring the data management capabilities of CARESTREAM IMS combined with the benefits of PicomEnterprise can help improve patient outcomes, increase efficiency and reduce departmental costs.

ScImage's powerful web-based cardiology software solution—PicomEnterprise—enables cardiology departments, outpatient cardiology clinics, and private-practice cardiologists to use a single database to manage, distribute and safeguard cardiac information gathered at various points of care. PicomEnterprise decreases cost and increases productivity by providing a single point of access to echo, cath, ECG, vascular, nuclear cardiology and hemo-dynamic reports.

This software is designed specifically for the cardiology environment using a single platform architecture that unifies document and image management. ScImage's solution can acquire DICOM or non-DICOM images, and provides the ability to attach all images, documents, digital dictations and even Microsoft Windows-based files to a patient's record and to provide a centralized location for accessing patient history.

CARESTREAM IMS is a scalable platform for the management and storage of digital medical images and information offering on-site or remotely hosted storage solutions. CARESTREAM IMS can be scaled to meet the needs of small-to-large hospitals and medical practices as well as regional or national healthcare information systems—all within the same software framework.

"We are pleased to establish such a partnership with this internationally recognized leader in medical imaging technologies. The combination of PicomEnterprise and the IMS platform is a natural fit,"

FOR IMMEDIATE RELEASE

stated ScImage Founder and CEO, Sai P. Raya, Ph.D. "The products are complementary and support the enterprise-wide distribution of multi-disciplinary clinical content."

Medical professionals using solutions from Carestream Health with PicomEnterprise will find it easier and more efficient to review and manage images from patients' cardiology exams. Cardiology images and reports are also available via the Internet, providing secure, remote access to critical patient studies.

"Multi-lab, multi-modality cardiology PACS solutions reduce the administrative burden by enabling hospital IT departments to consolidate individual PACS solutions into a cohesive, centralized solution," said Michael W. Jackman, President, Healthcare Information Systems, Carestream Health. "The combination of CARESTREAM Information Management Solutions and PicomEnterprise can lead to lower cost of ownership, while helping deliver improvements in the way cardiac care is delivered and managed."

ScImage is a privately held advanced enterprise imaging and information management company that provides innovative solutions for radiology, cardiology and orthopedics. Founded in 1993 by Sai P. Raya, Ph.D., the Los Altos, California company began operations by offering comprehensive clinical software on an OEM basis to a number of industry leaders.

Carestream Health is a global medical imaging and healthcare IT company with more than \$2.5 billion in revenue and approximately 8,100 employees. The company's products, solutions and broad portfolio of professional services are present in 90% of hospitals worldwide.

About ScImage

Founded in 1993, ScImage, Inc. is a privately held company, headquartered in Los Altos, California. ScImage is a global leader in the development of advanced medical imaging technology and workflow solutions for radiology and cardiology. At the center of the ScImage's image and information management system is PICOM, a web server-based technology that works independent of modalities and departments to seamlessly deliver multi-modality image and information management, archiving, offsite disaster recovery and telemedicine functionality. For more information about ScImage and the PICOM family of products, visit their website at www.scimage.com or call 1-866-SCIMAGE.
