ScImage Announces Improvements to PicomEnterprise Reporting Suite

Company Improves on Pervasive Physician-Specific Reporting Package

Los Altos, CA – November 11, 2009 - ScImage, a leading enterprise imaging and informatics company, announced today that its anywhere-diagnostic-reporting suite now includes voice recognition for multiple specialties while delivering unparalleled physician-specific configurability for multiple disciplines. The company intends to showcase the new suite at the upcoming Radiological Society of North America Exhibits in Chicago, Illinois.

PicomEnterprise provides an unrivaled reporting foundation with superior flexibility on an enterprise-wide basis. A complete and highly configurable radiology reporting module based on Dragon speech engine is natively available from the physician worklist. The speech and reporting tools are equally suited for physicians who wish to dictate within PicomEnterprise for external transcription and proceed with batch signing. Combine these reporting tools with ScImage's instantly configurable bidirectional HL7 interfaces and you can address a variety of workflow paradigms with ease.

In addition to the needs of radiology, echocardiography and vascular ultrasound, the improved reporting suite addresses nuclear cardiology, Holter monitoring and cardiac catheterization. The new reporting suite combines structured reporting elements such as procedure descriptions, indications, measurements, hemodynamic data, findings and conclusions. It can also be configured to include a variety of other non-structured reporting data. Native voice recognition within the structured reporting application supports increased levels of efficiency. This gives physicians a variety of methods and preferences that utilize voice-driven macros, structured reporting, free form reporting, or any combination thereof to finalize the interpretation.

"ScImage is committed to delivering tools that support efficient reading and faster reporting turnaround," stated Sai P. Raya, Ph.D., ScImage Founder and CEO. "Intelligent reporting tools that have a high degree of user-specific configurability, industry leading voice-recognition capabilities and flexible integration with existing information systems are a critical component."

About ScImage

Founded in 1993, ScImage, Inc. is a privately held company, headquartered in Los Altos, California.

FOR IMMEDIATE RELEASE

ScImage is a global leader in the development of advanced medical imaging and workflow solutions for radiology, cardiology and electronic medical record content management. As a true enterprise PACS company, ScImage's mission is to provide a shared infrastructure solution for all imaging intensive departments throughout the healthcare enterprise. At the center of the ScImage's technology is PICOM, a web service technology that works independent of data types, modalities and departments to seamlessly deliver multi-modality image and information management, multi-PACS archiving, offsite disaster recovery and telemedicine functionality. ScImage®, PICOM®, NetraMD®, ForeverOnline®, PicomOnline™, PicomWeb™, HyperStreaming™, OnDemand TelePACS™ and EPF™ are trademarks or registered trademarks of ScImage, Inc.
