ScImage Advances Enterprise PACS Platform in Movement Toward RIS-Less PACS

Broad functional base includes scheduling, workflow assignment & advanced reporting

Los Altos, CA – October 8, 2010 - ScImage, announced today the immediate availability of its PicomEnterprise PACS with broad functionality enhancements blending many traditional RIS functions into the core PACS platform. This release offers a host of advantages for current and future ScImage customers in immediate, quantifiable savings over the legacy RIS / PACS approach.

With the unified implementation model offered by ScImage, the typical duplicitous costs of front-end HIS and backend EMR interfaces are eliminated, saving tens of thousands of dollars in initial purchase and on-going support costs.

In addition, the natural integration of the two traditionally distinct products creates a seamless and intuitive platform for managing the entire clinical process: from scheduling & modality worklist, tech notes & ER discrepancy processing, the delivery of a comprehensive reading packet for the physician, to the superior, flexible reporting platform. The new workflow engine also offers customer-configurable routing of exam data based on dynamic criteria for specialist reading and workload balancing.

"As an enterprise PACS provider, we are able to extend our workflow management approach beyond traditional radiology, to provide all clinical imaging departments with the same features and advantages", stated Sai P. Raya, Ph.D., ScImage Founder and CEO. "Having typical RIS functions built into our PicomEnterprise PACS provides our customers with a measurable economy of scale that allows them to stay competitive in their respective markets."

About ScImage

Founded in 1993, ScImage, Inc. is a privately held company, headquartered in Los Altos, California. ScImage is a global leader in the development of advanced medical imaging and workflow solutions for radiology, cardiology, orthopedics, obstetrics and electronic medical record content management. As a true enterprise PACS company, ScImage's mission is to provide a shared infrastructure solution for all imaging intensive departments throughout the healthcare enterprise. At the center of the

ScImage's technology is PICOM, a web service technology that works independent of data types, modalities and departments to seamlessly deliver multi-modality image and information management, multi-PACS archiving, Cloud PACS services, offsite disaster recovery and telemedicine functionality. ScImage®, PICOM®, NetraMD®, ForeverOnline®, PicomOnline™, PicomWeb™, HyperStreaming™, OnDemand TelePACS™ and EPF™ are trademarks or registered trademarks of ScImage, Inc. For more information about ScImage and the PICOM family of products, visit their website at www.scimage.com or call 1-866-SCIMAGE.
