

FOR IMMEDIATE RELEASE

## ScImage Enhances Browser-Based ECG with Interactive Platform

---

Multi-format platform provides precise visualization of ECG morphology, presenting raw, waveforms rendered on the fly.

**Los Altos, CA – September 12, 2011** - Understanding the importance and immediacy of having ubiquitous access to raw ECG waveforms for clinical decision support, ScImage bolstered its already formidable browser based ECG delivery utility in PicomWeb.

In keeping with their open-architecture philosophy for widespread, multi-platform accessibility, ScImage designed a streamlined new user interface based on advanced machine independent HTML5 codebase.

This new ECG platform presents especially well in web tablets and smart-phone profiles. Interactive navigation and manipulation are performed through gestures or clicks, depending on the platform. This new design scheme will empower physicians to make urgent critical care decisions from remote locations with confidence.

ScImage's PicomWeb platform extends the content of ScImage's PicomEnterprise PACS to the ubiquitous web for complete access to multi-specialty imaging and reporting; for radiology, cardiology and other clinical specialties.

PicomECG is available as a standalone ECG management system, as part of an Enterprise wide PACS, or as a Cloud based service. For more information about PicomECG, [click here](#).

The company's "Picom" trademark denotes Patient Information and Communication in Medicine, which expands on the image-centric DICOM concept of Digital Imaging and Communication in Medicine.

### About ScImage

Founded in 1993, ScImage, Inc. is a privately held company, headquartered in Los Altos, California.

## FOR IMMEDIATE RELEASE

ScImage is a global leader in the development of advanced medical imaging and workflow solutions for radiology, cardiology, orthopedics, obstetrics and electronic medical record content management. As a true enterprise PACS company, ScImage's mission is to provide a shared infrastructure solution for all imaging intensive departments throughout the healthcare enterprise. At the center of ScImage's technology is PICOM, a web service technology that works independent of data types, modalities and departments to seamlessly deliver multi-modality image and information management, multi-PACS archiving, Cloud PACS services, offsite disaster recovery and telemedicine functionality. For more information about ScImage and the PICOM family of products, visit their website at [www.scimage.com](http://www.scimage.com) or call 1-866-SCIMAGE.
